SUMMARY

My name is Malina Ierome, I am a passionate web developer always looking for new opportunities and experiences! My works utilize many languages however I specialize in **JavaScript**, **React.js**, **HTML5**, **CSS3** and **Node.js** to develop beautiful web applications. My journey started at University of Nevada - Las Vegas where I am currently in progress of achieving a Bachelor's degree in Computer Science. Shortly after that I started at PunchCode, an immersive full-time 12 week coding school in Las Vegas, Nevada where it teaches students the fundamentals for a Junior Full Stack Web Developer position.

SKILLS

TECHNICAL SKILLS

HTML5, JavaScript, jQuery, Node.js, CSS3, React.JS, Redux.js, Express.js, MySQL, SASS, Angular.js, Surge, Git, Git version control, Github, Semantic UI, Bootstrap, JSON, Firebase, Ionic UI, WordPress

EDUCATION

PunchCode

June 2019 - Sept. 2019

- PunchCode is an immersive full-time coding school with a 12 week duration providing the fundamentals of being a web developer
- Assembled a small portfolio of responsive projects and prototypes using React.js, Redux.js, JavaScript, Node.js and Express.js
- Adequately assimilated 500+ hours with technical and professional training and 700+ hours working on code
- Acquired a strong familiarity with Git Version Control by contributing to group projects working closely with classmates
- Became fluid with Scrum framework and working in an Agile methodology during the creation of my groups capstone project
- Received a certification of completion at the end of the intense cohort

University of Nevada - Las Vegas

Aug. 2018 - Current

Currently in progress of obtaining a Computer Science Bachelor's degree

Palo Verde High School

Advanced Honors High School Diploma

PROJECTS

Kana

Aug. 2019 - Current

Kana is a web and mobile application giving users with the speculation of "I don't know, what do you want to eat?" an easy solution.

- created a mobile version for the public and a desktop version for restaurant users
- used **React JS** and **Express.js** to build the front and back end of the user interface
- used **MySql** to create a database for the entire project
- used **Firebase** so that restaurant admins can import menu item information and upload images
